

CORE VALUES

Sri Krishna College of Technology is a vibrant institute of higher education which provides extraordinary freedom of opportunity—to explore, to collaborate and to challenge oneself is the hallmark. It lays strong emphasis on collaborative research and stands apart from other institutes by its participatory work culture, student care programmes and high industry interaction. SKCT has always envisioned its campus as a springboard for the young talents to the best of the industries. The Institute is committed to foster, promote and sustain the scientific temper among the faculty and students wherever possible with a view to serving the society. The core values are our mainstays that strengthen the institutional culture, identity, and work ethics. It defines the characteristic traits of each and every stakeholder of SKCT and it acts as a guiding spirit for us.

Evolve and Adapt: The people who work here are smart, dedicated, and committed with core values. We believe our nation's future depends on our ability to make effective use of the enormous talent and resources represented by the diversity of our people and our ideas.

Team on a Mission: Teamwork means being able to set personal preferences aside while focusing on the greater good. The creation of something out of nothing is one of the most important aspects of teamwork. Once a team becomes empowered, they tend to grow in both confidence and skill. We have amazing individuals, but it is only through teamwork that we achieve greatness. We encourage teamwork environment where each member of the institution can contribute by offering valuable suggestions for the overall improvement.

Challenge and Collaborate: To innovate, our team is our toughest critics, our biggest challengers and our loudest supporters. Students are endowed with limitless abilities and SKCT provides ample opportunity to the young technocrats to exhibit their talents in the field of science and technology through Incubation Centres which ultimately give birth to innovations.

Work Ethic Wins: We believe the teams willing to put in the extra effort, go the extra mile, and are accountable for their actions, will be the ones who see their visions and dreams realized.

Be Pioneers: We innovate and push for boundless creativity through curiosity. Meeting sustainable development goals will require action on a number of fronts, including harnessing and maximizing the potential of technological innovation. The Special Interest Groups strive and leap to a new environment-friendly techno-economic paradigm.

Act with Integrity: We adopt truthfulness, honesty, fairness and transparency in the conduct of our academic, administrative and professional activities as a means for achieving holistic development of the students.

Autonomy and Attitude: We're a team of self-starters who take serious pride in our work – and it shows. No task is too big when you have a team that is willing to go the distance to move mountains and achieve nothing less than success. We provide the freedom of opportunity—to explore, to collaborate and to challenge oneself in their field of specialization.

Authenticity: We encourage students to be themselves and we embrace everyone for their unique contributions to the team. We also set expectations that everyone should acknowledge, and take responsibilities for mistakes. And then, treat mistakes as opportunities for learning and growth.

Community Development

An exclusive Centre for Social and Community services caters to the needs of the local community, especially the under-privileged and the socially disadvantaged sectors of the community by offering Training and Development in Employability Skills and Entrepreneurship Initiatives with the participation of the community and in collaboration with the Government and Corporate. This service will not only benefit the underprivileged people, but also give a good exposure to students to interact with the local community and to be aware of social issues.
